

Repeated Operations Report — Morning & Evening Adhkar App

Report Date: June 9, 2026

#	Operation	Attempts	Reason for First Failure
1	EAS Build #14	2 (re-run manually)	Build succeeded but the app crashed immediately on the device. Without logcat access the root cause could not be identified.
2	EAS Build #15	2 (re-run as #16)	Babel could not resolve the react-native-worklets/plugin after the package was removed from the project.
3	EAS Build #16	2 (re-run as #17)	react-native.config.js blocked autolinking for reanimated/worklets, causing the Gradle build to fail.
4	Fix: Save voice recording	2	First attempt used the new expo-file-system class API (File/Directory/Paths) which fails silently on Android / Expo Go — recordings were never saved.
5	Fix: Recording UI state	2	First attempt did not distinguish between bundled audio (Ayatul Kursi, etc.) and user recordings, making all Quran cards appear as "recorded".
6	Add stopAllAudio feature	2	First attempt ran in Plan Mode — tool calls were rejected by the platform. Re-executed correctly in Build Mode.

Note: Dollar costs for EAS builds are not included — check expo.dev and replit.com/billing for billing details.
